Yoder Unit 11- 3703924041- During plugging operations, We set a bridge plug at 4565', then because the top of cement behind the 4 1/2" casing was above the Marcellus formation at 3394', we had to set a class A cement plug to cover the Marcellus formation top at about 3550'. After setting the plug inside the 4 1/2" casing, we went in the well, and tagged the top of the cement at 3535'. It was decided/ agreeable to move forward, and cut the 4 1/2" casing at about 3380'. We will set a 500' cement plug from the casing stump, then a gel spacer up to about 618', and set a surface casing plug from 618' to 418'(8 5/8" casing shoe @518'). We will check for any gas flow the next day, and confirm cement top. After moving the rig out, we plan to top well off with pea gravel, then cut and cap the well 3' below grade with the api welded on the ID plate.
