Justin,

EQT formally requests to withdrawal the Webster Hollow 31H OG-24. After further review of the formation depths for this particular pad we have determined that the alternate method is not needed.

Thanks

Subject: [EXTERNAL] EQT Webster Hollow 31H 129-29317

Good morning Renee,

DEP received the attached information for the EQT Webster Hollow 31H 129-29317, including the alternative method and casing and cementing plan.

Upon review of the alternative method, it is unclear what EQT is proposing that is not prescribed by regulatory requirements. Can you please clarify what specific regulatory requirement(s) EQT is seeking to deviate from?

The casing and cementing plan included does not appear to meet the requirements of 78a.83a. What was provided to DEP appears to be a portion of the casing and cementing plan focused on the intermediate casing through the gas storage horizon. DEP recommends submitting the full casing and cementing plan and reviewing the requirements of 78a.83a, as

the excerpt provided does not provide the required information. The final paragraph indicated as a note should be removed, as 78a.83a.(d) allows for revisions to the plan to be made as long as it is documented in the plan and available for review.

If you have any questions please feel free to reach out.

Thank you,
