A proposed alternate method is subject to provisions in §3221 of the 2012 Oil and Gas Act, 58 Pa. C.S. §3221 Section 13 of the Coal and Gas Resource Coordination Act, 58 P.S. §513 and 25 PA Code §§78.75-78.75a (relating to Alternate Methods.) ***Attach proof of notification of coal operator(s).***

Describe in reasonable detail using a written description and / or diagram:

1. **the proposed alternate method or materials, and**
2. **the manner in which the alternative will satisfy the goals of the laws and regulations.**

The well pump and tubing will be removed from the well. A down hole packer will be placed in the production hole. A polymer gel will be pumped into the well laterals so the well can be safely mined through. A minimum of 10,000 gallons or 100% of the lateral volume will be pumped to fill the laterals. Once the gel has set, the packer will be removed. The production hole will be cemented with Class A expanding cement from the total depth or attainable bottom to the surface once the laterals have been safely mined through.

If it becomes necessary to deviate from the "proposed alternate method", approval must be received from the District Oil & Gas Inspector and coal operator affected.
