Conner 2 well- API 37-085-22116. The well was drilled to 1018', and 962' of 8 5/8" casing was ran in the well and cemented back to surface. The well's 8 5/8" casing was notched at 887', 693', and 695' to produce the Berea formation. As we went to plug the well, we ran tubing in the well, and tagged up on the original cement casing plug at 956' deep, 6" above the casing shoe.

Proposed alternate method: 1st, We request attainable bottom at 956' . Went in hole with tubing to TD, then we set a Class A cement surface casing plug from 956' to 300'. We tagged cement top on the final plug at 272', and the well was checked for gas, no gas on well. Pea Gravel will be installed in the well from the top of surface casing plug to surface. After everything is verified, the well casing will be cut off 3' below grade and well will have a well ID plate welded on, with API #37-085-22116 welded on the plate.
