We intend to shorten the pressure test on the intermediate casing from 30 minutes to 10 minutes. The intention in the reduction of test time is to allow us the ability to pressure test our casing before our cement reaches a compressive strength of 10 psi. Completion of the pressure test before this threshold is reached will allow the cement the best opportunity to maintain the highest quality bond and provide the best possible isolation.

This alternate method is requested for § 78a.84(f) requirements
